

Mouse GDF15 ELISA Kit | GDF15 elisa kit

Mouse GDF15 ELISA Kit

CATALOG # AAA105669	REACTIVITY Mouse	APPLICATIONS ELISA
-------------------------------	----------------------------	------------------------------

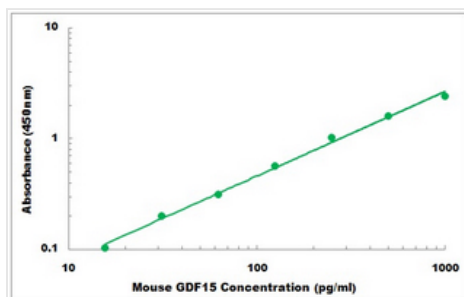

PRODUCT SYNONYMS

GDF15; Mouse GDF15 ELISA Kit; MIC1; PDF; PLAB; PTGFB; Growth/differentiation factor 15; GDF-15; Macrophage inhibitory cytokine 1; MIC-1; NSAID-activated gene 1 protein; NAG-1; NSAID-regulated gene 1 protein; NRG-1; Placental TGF-beta; Placental bone morphogenetic protein; Prostate differentiation factor; GDF15 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	The Mouse GDF15 ELISA Kit allows for the detection and quantification of endogenous levels of natural and/or recombinant Mouse GDF15 proteins within the range of 15.6 pg/ml - 1000 pg/ml.
Sequence Length	303
Samples	Cell Culture Supernatants, Serum, Plasma
Sensitivity	The minimum detectable dose of Mouse GDF15 is typically less than 10 pg/ml.
Applicable Applications for GDF15 elisa kit	ELISA (Sandwich ELISA)
Preparation and Storage	Shipped and store at 4 degree C for 6 months, store at -20 degree C for one year. Avoid freeze/thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for GDF15 elisa kit	Principle of the assay: The Bioscience Mouse GDF15 ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of Mouse GDF15 in Cell Culture Supernatants, Serum, Plasma. This assay employs an antibody specific for Mouse GDF15 coated on a 96-well plate. Standards and samples are pipetted into the wells and GDF15 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-Mouse GDF15 antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of GDF15 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm. Background: GDF-15 (Growth differentiation factor 15),also known as TGF-PL, MIC-1, PDF, PLAB, and PTGFB, is a protein belonging to the transforming growth factor beta superfamily that has a role in regulating inflammatory and apoptotic pathways in injured tissues and during disease processes. Using FISH, the MIC1 gene is mapped to 19p13.2-p13.1. Its expression in liver can be significantly up-regulated in during injury of organs such as liver, kidney, heart and lung. GDF15 showed increased expression and secretion during erythroblast maturation. GDF15 functions as an antiinflammatory cytokine by directly interfering with chemokine signaling and integrin activation.

NCBI AND UNIPROT INFORMATION

NCBI GI #	170784848
NCBI GeneID	23886
NCBI Accession #	NP_035949.2
NCBI GenBank Nucleotide #	NM_011819.2
UniProt Accession #	Q9Z0J7; Q6NX63
Molecular Weight	33,225 Da
NCBI Official Full Name	growth/differentiation factor 15
NCBI Official Synonym Full Names	growth differentiation factor 15
NCBI Official Symbol	Gdf15
NCBI Official Synonym Symbols	SBF; MIC-1; NAG-1
NCBI Protein Information	growth/differentiation factor 15; GDF-15; macrophage inhibiting cytokine-1
UniProt Protein Name	Growth/differentiation factor 15
UniProt Gene Name	Gdf15
UniProt Synonym Gene Names	Sbf; GDF-15
UniProt Entry Name	GDF15_MOUSE

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
