Biological Significance	TNFAIP1 is a human gene. The gene, present in single copy, was located in the 17q22-q23 region. This gene was identified as a gene whose expression can be induced by the tumor necrosis factor alpha (TNF) in umbilical vein endothelial cells. Studies of a similar gene in mouse suggest that the expression of this gene is developmentally regulated in a tissue-specific manner. The protein is involved in the primary response of the endothelium to TNF.
Immunogen	TNFAP1 antibody was raised in Rabbit using a synthetic peptide corresponding to a sequence at the N-terminal of human TNF alphaIP1, identical to the related rat and Rabbit sequence as the immunogen
Preparation and Storage	Store at 4 degree C for short term storage. For long term storage aliquot and store at -20 degree C, avoid repeated freeze/thaw cycles.
