ADDITIONAL INFORMATION

Related Product Information for Se-P elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human Se-P antibody. Se-P present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human Se-P Antibody is added and binds to Se-P in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Se-P antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human Se-P. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Selenoprotein-P (also known as Se-P) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
