ADDITIONAL INFORMATION

Related Product Information for PLG elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with plasminogen. Standards or samples are added to the appropriate microtiter plate wells with Horseradish Peroxidase (HRP) conjugated antibody preparation specific for plasminogen. The competitive inhibition reaction is launched between with pre-coated plasminogen and plasminogen in samples. A substrate solution is added to the wells and the color develops in opposite to the amount of plasminogen in the sample. The color development is stopped and the intensity of the color is measured.
