ADDITIONAL INFORMATION

Related Product Information for His-Streptavidin recombinant protein	Streptavidin, a tetrameric protein secreted by Streptomyces avidinii, binds tightly to a small growth factor biotin. It finds wide use in molecular biology through its extraordinarily strong affinity for the vitamin biotin; the dissociation constant (Kd) of the biotin-streptavidin complex is on the order of ~10-15 mol/L. The high affinity recognition of biotin and biotinylated molecules has made streptavidin one of the most important components in laboratory kits. Recombinant His tagged streptavidin was expressed in E Coli and purified by using conventional chromatography techniques.
