| Buffer Solution                                | Phosphate buffered saline                                                                                                                                                                                                                                                                                                                                                                                                         |
| Target Species                                 | Human                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Preparation and Storage                        | Store at 4 degree C or at -20 degree C if preferred. This product should be stored undiluted. Storage in frost-free freezers is not recommended. This product is photosensitive and should be protected from light. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend microcentrifugation before use.<br>Shelf Life: 18 months from date of despatch. |

**Application Data**  
Staining of KG1 lymphocytes with Mouse anti Human CD59:FITC

**Application Data**  
Staining of human peripheral blood lymphocytes with Mouse anti Human CD59: Azide Free

**Application Data**  
Staining of human peripheral blood lymphocytes with Mouse anti Human CD59:RPE

**Application Data**  
Staining of human peripheral blood lymphocytes with Mouse anti Human CD59:Alexa Fluor488

**Application Data**  
Published customer image: The effect of protease treatment on influenza virion associated host proteins. Purified influenza A/WSN/33 virus was either mock treated or subjected to overnight digestion with subtilisin followed by concentration through a sucrose cushion. 10 ug of mock infected cell lysate (lane 1) or influenza infected cell lysate (lane 2) and 2 ug of untreated influenza virions (lane 3) or protease treated influenza virions (lane 4) were then analyzed by western blot with antibodies against the indicated proteins. Numbers to the right are molecular weight markers. From: Shaw ML, Stone KL, Colangelo CM, Gulcicek EE, Palese P (2008) Cellular Proteins in Influenza Virus Particles. PLoS Pathog 4(6): e1000085.

**Application Data**  
Staining of human peripheral blood granulocytes with Mouse anti Human CD59:Alexa Fluor 647

| Related Product Information for anti-CD59 antibody | Mouse anti Human CD59 antibody, clone MEM-43 reacts with a PI-linked glycoprotein, Mw 18-20kDa found on all types of leucocytes including platelets. The antigen is expressed on many haemapoietic and non-haemapoietic cells. MEM-43 has been shown to stimulate NK activity. CD59 is expressed by erythrocytes and therefore staining in whole blood systems requires a high concentration of antibody. The epitope recognized by Mouse anti Human CD59 antibody, clone MEM-43 is lost after reduction, therefore, non-reducing conditions are required for western blotting techniques. |
