Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat CTX-Collagen Type 3 (also known as col3) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat col3 antibody. col3 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat col3 Antibody is added and binds to col3 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated col3 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat col3. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
