

## Goat Leptin (LEP) ELISA Kit | LEP elisa kit

Goat Leptin (LEP) ELISA Kit

CATALOG #  
**AAA121657**

REACTIVITY  
**Goat**

### PRODUCT SYNONYMS

Leptin (LEP); Goat Leptin (LEP) ELISA Kit; LEP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Goat                                                                     |
| Sequence Length         | 167                                                                      |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 05ng/ml - 100ng/ml                                                       |
| Sensitivity             | 0.27ng/ml                                                                |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for LEP elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of Goat Leptin (also known as LEP) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Goat LEP antibody. LEP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Goat LEP Antibody is added and binds to LEP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated LEP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Goat LEP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
