Intended Uses: This sandwich kit is for the accurate quantitative detection of Horse Tumor Necrosis Factor Alpha (also known as TNF-A) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Horse TNF-A antibody. TNF-A present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Horse TNF-A Antibody is added and binds to TNF-A in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TNF-A antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Horse TNF-A. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
