Intended Uses: This sandwich kit is for the accurate quantitative detection of Horse Glucose Dependent Insulin Releasing Polypeptide (also known as GIP) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Horse GIP antibody. GIP present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Horse GIP Antibody is added and binds to GIP in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GIP antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Horse GIP. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
