ADDITIONAL INFORMATION

Related Product Information for INS elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep INS antibody. INS present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep INS Antibody is added and binds to INS in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated INS antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep INS. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep Insulin (also known as INS) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
