Intended Uses: This sandwich kit is for the accurate quantitative detection of Sheep Interleukin 10 (also known as IL-10) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Sheep IL-10 antibody. IL-10 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Sheep IL-10 Antibody is added and binds to IL-10 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated IL-10 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Sheep IL-10. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
