Intended Uses: This sandwich kit is for the accurate quantitative detection of human Beta Defensin 6 (also known as HBD6) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human HBD6 antibody. HBD6 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human HBD6 Antibody is added and binds to HBD6 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HBD6 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human HBD6. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
