Intended Uses: This sandwich kit is for the accurate quantitative detection of Bovine Fibulin 1 (also known as FBLN1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Bovine FBLN1 antibody. FBLN1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Bovine FBLN1 Antibody is added and binds to FBLN1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated FBLN1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Bovine FBLN1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
