ADDITIONAL INFORMATION

Related Product Information for YAP1 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Wingless Type MMTV Integration Site Family, Member 6 (also known as WNT6) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human WNT6 antibody. WNT6 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human WNT6 Antibody is added and binds to WNT6 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated WNT6 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human WNT6. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
