ADDITIONAL INFORMATION

Related Product Information for ADRA2C elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Alpha-2B Adrenergic Receptor (also known as ADRA2B) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human ADRA2B antibody. ADRA2B present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human ADRA2B Antibody is added and binds to ADRA2B in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ADRA2B antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human ADRA2B. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
