Related Product Information for CDX2 elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Holo-Transcobalmine (also known as HTC) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human HTC antibody. HTC present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human HTC Antibody is added and binds to HTC in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HTC antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human HTC. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
