ADDITIONAL INFORMATION

Related Product Information for EIF4EBP1 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human EIF4EBP1 antibody. EIF4EBP1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human EIF4EBP1 Antibody is added and binds to EIF4EBP1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated EIF4EBP1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human EIF4EBP1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Eukaryotic translation initiation factor 4E-binding protein 1 (also known as EIF4EBP1) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
