ADDITIONAL INFORMATION

Related Product Information for IGLC2 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Ig lambda-2 chain C regions (also known as IGLC2) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human IGLC2 antibody. IGLC2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human IGLC2 Antibody is added and binds to IGLC2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated IGLC2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human IGLC2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
