ADDITIONAL INFORMATION

Related Product Information for KRT23 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Keratin, type 1 cytoskeletal 23 (also known as KRT23) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human KRT23 antibody. KRT23 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human KRT23 Antibody is added and binds to KRT23 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated KRT23 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human KRT23. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
