ADDITIONAL INFORMATION

Related Product Information for PLXNB3 elisa kit	Principle of the Assay: The Picokine Human PLXNB2 Pre-Coated ELISA (Enzyme-Linked Immunosorbent Assay) kit is a solid phase immunoassay specially designed to measure Human PLXNB2 with a 96-well strip plate that is pre-coated with antibody specific for PLXNB2. The detection antibody is a biotinylated antibody specific for PLXNB2. The capture antibody is A monoclonal antibody from mouse, the detection antibody is a biotinylated detection polyclonal antibody from goat. The kit contains recombinant Human PLXNB2 with immunogen: Expression system for standard: NSO, Immunogen sequence: L20-L1838. The kit is analytically validated with ready to use reagents. To measure Human PLXNB2, add standards and samples to the wells, then add the biotinylated detection antibody. Wash the wells with PBS or TBS buffer, and add Avidin-Biotin-Peroxidase Complex (ABC-HRP). Wash away the unbounded ABC-HRP with PBS or TBS buffer and add TMB. TMB is substrate to HRP and will be catalyzed to produce a blue color product, which changes into yellow after adding acidic stop solution. The density of the yellow product is linearly propotional to Human PLXNB2 in the sample. Read the density of the yellow product in each well using a plate reader, and benchmark the sample wells' readings against the standard curve to determine the concentration of Human PLXNB2 in the sample!!Background/Introduction: Members of the B class of plexins, such as PLXNB2 are transmembrane receptors that participate in axon guidance and cell migration in response to semaphorins.This gene is mapped to 22q13.33.
