Application	Chemiluminescent immunoassay for Antigen Detection.
Intra-assay Precision (Precision within an assay)	3 samples with low, middle and high level Brain Natriuretic Peptide (BNP) were tested 20 times on one plate, respectively.
Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Brain Natriuretic Peptide (BNP) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for BNP clia kit	The microplate provided in this kit has been pre-coated with an antibody specific to Brain Natriuretic Peptide (BNP). Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to Brain Natriuretic Peptide (BNP). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then the mixture of substrate A and B is added to generate glow light emission kinetics. Upon plate development, the intensity of the emitted light is proportional to the Brain Natriuretic Peptide (BNP) level in the sample or standard.;
Product Categories/Family for BNP clia kit	Cardiovascular biology; Neuroscience; Hormone metabolism
