

Human Neuregulin 1 (NRG1) ELISA Kit | NRG1 elisa kit

Human Neuregulin 1 (NRG1) ELISA Kit

CATALOG #
AAA136493

REACTIVITY
Human

PRODUCT SYNONYMS

Neuregulin 1 (NRG1); Human Neuregulin 1 (NRG1) ELISA Kit; ARIA; GGF; HGL; HRG; HRGA; NDF; SMDF; Acetylcholine receptor-inducing activity; Glial growth factor; Heregulin; Neu differentiation factor; Sensory and motor neuron-derived factor; NRG1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of NRG1NRG1. No significant cross cross-reactivity or interference between NRG1 and analogues was observed.
Sequence Length	640
Samples	Human serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	0.156-10ng /mL
Sensitivity	< 0.050.055ng/mL mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level NRG1 were tested 20 times on on e plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level NRG1 were tested on 3 different plates, 8 replicates in each plate plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for NRG1 elisa kit	Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to NRG1. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to NRG1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain NRG1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of NRG1 in the samples is then determined by comparing the O.D. of the samples to the standard curve. Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of NRG1 in human serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.
