

## Rat Beta-Endorphin (bEP) ELISA Kit | bEP elisa kit

Rat Beta-Endorphin (bEP) ELISA Kit

CATALOG #  
**AAA13931**

REACTIVITY  
**Rat**

### PRODUCT SYNONYMS

Beta-Endorphin (bEP); Rat Beta-Endorphin (bEP) ELISA Kit; b-EP; bEP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Rat                                                                                                                                                                                                        |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of bEP. No significant cross-reactivity or interference between bEP and analogues was observed.                                    |
| Sequence Length         | 31                                                                                                                                                                                                         |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                   |
| Samples                 | Rat serum, plasma, tissue homogenates, cell lysates, cerebrospinal fluid, cell culture supernates or other biological fluids                                                                               |
| Detection Range         | 15.6-1000pg/mL                                                                                                                                                                                             |
| Sensitivity             | < 4.35pg/mL                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level bEP were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                      |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level bEP were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%    |
| Preparation and Storage | For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C. |

ADDITIONAL INFORMATION

|                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for bEP elisa kit | <p>Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to bEP has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled bEP and unlabeled bEP (Standards or samples) with the pre-coated antibody specific to bEP. After incubation the unbound conjugate is washed off. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of bEP in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of bEP in the sample.</p> <p>Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of bEP in rat serum, plasma, tissue homogenates, cell lysates, cerebrospinal fluid, cell culture supernates or other biological fluids.</p> |
