Inter-assay Precision (Precision between assays)	3 samples with low, middle and high level Peptide YY (PYY) were tested on 3 different plates, 8 replicates in each plate.
CV(%) =	SD/meanX100
Intra-Assay	CV<10%
Inter-Assay	CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for PYY elisa kit	This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Peptide YY (PYY) has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Peptide YY (PYY) and unlabeled Peptide YY (PYY) (Standards or samples) with the pre-coated antibody specific to Peptide YY (PYY). After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Peptide YY (PYY) in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Peptide YY (PYY) in the sample.
