| Reactivity              | Mouse                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of brevican. No significant cross-reactivity or interference between brevican and analogues was observed.                                                                                                                                                                                                                                                                                                                                                                                                               |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Samples                 | Mouse tissue homogenates, cell lysates, cell culture supernates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Detection Range         | 0.312-20ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Sensitivity             | < 0.113ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level brevican were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level brevican were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                                                                                                                                                                                                                                                                    |
| Preparation and Storage | Store at 4 degree C for 1 month/-20 degree C for long-term(within shelf life)<br>Shelf Life: 8 months<br>The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

### ADDITIONAL INFORMATION

|                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Related Product Information for BCAN elisa kit | <p>Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to brevican. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to brevican. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain brevican, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of brevican in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> <p>Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of brevican in mouse tissue homogenates, cell lysates, cell culture supernates and other biological fluids.</p> |

| NCBI Official Full Name          | brevican core protein isoform 2 |
| NCBI Official Synonym Full Names | brevican                        |
| NCBI Official Symbol             | Bcan                            |
| NCBI Official Synonym Symbols    | Cspg7                           |
| NCBI Protein Information         | brevican core protein           |
| UniProt Protein Name             | Brevican core protein           |
| UniProt Gene Name                | Bcan                            |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
