ADDITIONAL INFORMATION

Related Product Information for IL-6 elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with an antibody specific to IL-6. Standards or samples are added to the appropriate microtiter plate wells with Biotin-conjugated IL-6. A competitive inhibition reaction is launched between IL-6 (Standards or samples) and Biotin-conjugated IL-6 with the pre-coated antibody specific for IL-6. The more amount of IL-6 in samples, the less antibody bound by Biotin-conjugated IL-6. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Substrate solution is added to the wells and the color develops in opposite to the amount of IL-6 in the sample. The color development is stopped and the intensity of the color is measured.
