Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with ACE. Standards or samples are added to the appropriate microtiter plate wells with Horseradish Peroxidase (HRP) conjugated antibody preparation specific for ACE. The competitive inhibition reaction is launched between with pre-coated ACE and ACE in samples. A substrate solution is added to the wells and the color develops in opposite to the amount of ACE in the samples. The color development is stopped and the intensity of the color is measured.
