Intended Uses: This ARRAb ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse ARRAb. This ELISA kit for research use only!

Principle of the Assay: ARRAb ELISA kit applies the competitive enzyme immunoassay technique utilizing Ryanodine Receptor antigen and an ARRAb-HRP conjugate. The assay sample and buffer are incubated together with ARRAb-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ARRAb concentration since ARRAb from samples and ARRAb-HRP conjugate compete for the Ryanodine Receptor antigen binding site. Since the number of sites is limited, as more sites are occupied by ARRAb from the sample, fewer sites are left to bind ARRAb-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ARRAb concentration in each sample is interpolated from this standard curve.
