

## Human Complement Factor B ELISA Kit | CFB elisa kit

Human Complement Factor B ELISA Kit

CATALOG #  
**AAA16029**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Complement Factor B; Human Complement Factor B ELISA Kit; CFB elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                 |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of CFB. No significant cross-reactivity or interference between CFB and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CFB and all the analogues, therefore, cross reaction may still exist in some cases. |
| Assay Type              | Quantitative Competitive or Sandwich                                                                                                                                                                                                                                                                                                                                                  |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                            |
| Sensitivity             | 0.1ug/mL                                                                                                                                                                                                                                                                                                                                                                              |
| Intended Uses           | This CFB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human CFB. This ELISA kit for research use only, not for therapeutic applications!                                                                                                                                                                                                  |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                   |

| Related Product Information for CFB elisa kit | <p>Principle of the Assay: CFB ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CFB. Standards or samples are then added to the microtiter plate wells and CFB if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CFB present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for CFB are added to each well to "sandwich" the CFB immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CFB and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CFB concentration in each sample is interpolated from this standard curve.</p> <p>Intended Uses: This CFB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human CFB. This ELISA kit for research use only, not for therapeutic or diagnostic applications!</p> |
