ADDITIONAL INFORMATION

Related Product Information for MUC5AC elisa kit	Principle of the Assay: MUC5AC ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-MUC5AC antibody and an MUC5AC-HRP conjugate. The assay sample and buffer are incubated together with MUC5AC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MUC5AC concentration since MUC5AC from samples and MUC5AC-HRP conjugate compete for the anti-MUC5AC antibody binding site. Since the number of sites is limited, as more sites are occupied by MUC5AC from the sample, fewer sites are left to bind MUC5AC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MUC5AC concentration in each sample is interpolated from this standard curve. Intended Uses: This MUC5AC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit MUC5AC.
