

Human Pancreastatin ELISA Kit | Pancreastatin elisa kit

Human Pancreastatin ELISA Kit

CATALOG #
AAA16466

REACTIVITY
Human

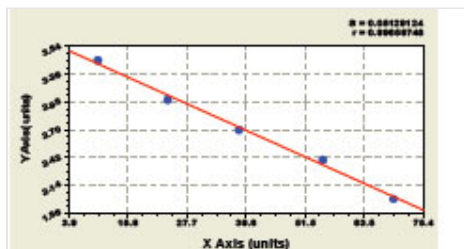

PRODUCT SYNONYMS

Pancreastatin; Human Pancreastatin ELISA Kit; Pancreastatin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	100-2500pg/mL
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Pancreastatin elisa kit

Intended Uses: This PAN ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human PAN. This ELISA kit for research use only!

Principle of the Assay: PAN ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PAN antibody and an PAN-HRP conjugate. The assay sample and buffer are incubated together with PAN-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PAN concentration since PAN from samples and PAN-HRP conjugate compete for the anti-PAN antibody binding site. Since the number of sites is limited, as more sites are occupied by PAN from the sample, fewer sites are left to bind PAN-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PAN concentration in each sample is interpolated from this standard curve.
