

Human PCI ELISA Kit | PCI elisa kit

Human PCI (Protein C Inhibitor) ELISA Kit

CATALOG #
AAA165199

REACTIVITY
Human

PRODUCT SYNONYMS

PCI; Human PCI (Protein C Inhibitor) ELISA Kit; PCI elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of Human PCI. No significant cross-reactivity or interference between Human PCI and analogues was observed. Note: Limited by current skills and knowledge, it is impossible for us to complete the cross- reactivity detection between Human PCI and all the analogues, therefore, cross reaction may still exist.
Sequence Length	406
Samples	Serum, Plasma, Biological Fluids
Assay Type	Sandwich
Detection Range	1.25-80ng/mL
Sensitivity	Min: 0.75ng/mL; Max: 80ng/mL
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for PCI elisa kit	Description: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of PCI in human serum, plasma and other biological fluids Principle of the Assay: This ELISA kit uses Sandwich-ELISA as the method. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human PCI. Standards or samples are added to the appropriate micro ELISA plate wells and bound by the specific antibody. Then a biotinylated detection antibody specific for Human PCI and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human PCI, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Human PCI. You can calculate the concentration of Human PCI in the samples by comparing the OD of the samples to the standard curve.
