

Mouse PIIINP ELISA Kit | PIIINP elisa kit

Mouse PIIINP (N-Terminal Procollagen III Propeptide) ELISA Kit

CATALOG #
AAA165845

REACTIVITY
Mouse

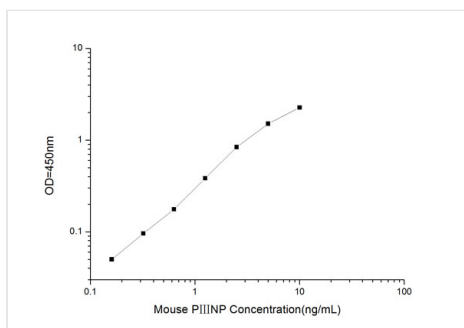

PRODUCT SYNONYMS

PIIINP; Mouse PIIINP (N-Terminal Procollagen III Propeptide) ELISA Kit; PIIINP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This kit recognizes Mouse P III NP in samples. No significant cross-reactivity or interference between Mouse P III NP and analogues was observed.
Samples	Serum, plasma and other biological fluids
Assay Type	Quantitative Sandwich
Detection Range	0.16-10ng/mL
Sensitivity	0.1ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, mid range and high level Mouse P III NP were tested 20 times on one plate, respectively.
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, mid range and high level Mouse P III NP were tested on 3 different plates, 20 replicates in each plate.
Preparation and Storage	Store at 4 degree C.

ADDITIONAL INFORMATION

Related Product Information for PIIINP elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Mouse P III NP concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Mouse P III NP. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Mouse P III NP and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse P III NP, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The OD value is proportional to the concentration of Mouse P III NP. You can calculate the concentration of Mouse P III NP in the samples by comparing the OD of the samples to the standard curve.
