ADDITIONAL INFORMATION

Related Product Information for anti-FLI1 antibody	This gene encodes a transcription factor containing an ETS DNA-binding domain. The gene can undergo a t(11; 22)(q24; q12) translocation with the Ewing sarcoma gene on chromosome 22, which results in a fusion gene that is present in the majority of Ewing sarcoma cases. An acute lymphoblastic leukemia-associated t(4; 11)(q21; q23) translocation involving this gene has also been identified. Alternative splicing results in multiple transcript variants.
