

Monkey Hepcidin ELISA Kit | Hepc elisa kit

Monkey Hepcidin ELISA Kit

CATALOG #
AAA17045

REACTIVITY
Monkey

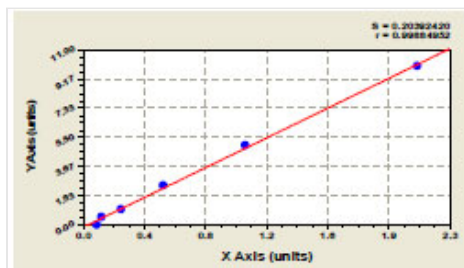

PRODUCT SYNONYMS

Hepcidin; Monkey Hepcidin ELISA Kit; Hepc elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Monkey
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Detection Range	2.5-50ng/mL
Sensitivity	0.1ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This HEPC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey HEPC.

Principle of the Assay: HEPC ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for HEPC. Standards or samples are then added to the microtiter plate wells and HEPC if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of HEPC present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for HEPC are added to each well to "sandwich" the HEPC immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain HEPC and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The HEPC concentration in each sample is interpolated from this standard curve.
