

## Human MYO (Myoglobin) CLIA Kit | MYO clia kit

Human MYO (Myoglobin) CLIA Kit

CATALOG #  
**AAA171051**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

MYO (Myoglobin); Human MYO (Myoglobin) CLIA Kit; MB; PVALB; MYO clia kit

### PRODUCT SPECIFICATIONS

|                 |                                                                                                                                          |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity      | Human                                                                                                                                    |
| Specificity     | This kit recognizes natural and recombinant MYO. No significant cross-reactivity or interference between MYO and analogues was observed. |
| Sequence Length | 154                                                                                                                                      |
| Assay Type      | Sandwich                                                                                                                                 |
| Detection Range | 0.625-40ng/mL                                                                                                                            |
| Sensitivity     | Min: 0.375ng/mL; Max: 40ng/mL                                                                                                            |

### ADDITIONAL INFORMATION

#### Related Product Information for MYO clia kit

**Intended Uses:** This CLIA kit applies to the in vitro quantitative determination of MYO concentrations in serum, plasma and other biological fluids.

**Principle of the Assay:** This kit uses Sandwich-CLIA as the method. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to MYO. Standards or samples are added to the appropriate micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for MYO and Avidin-Horseradish Peroxidase (HRP) conjugate is added to each micro plate well successively and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain MYO, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured spectrophotometrically by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of MYO. You can calculate the concentration of MYO in the samples by comparing the RLU value of the samples to the standard curve.
