

Rat Omentin-1 ELISA Kit | OMT-1 elisa kit

Rat Omentin-1 ELISA Kit

CATALOG #
AAA17157

REACTIVITY
Rat

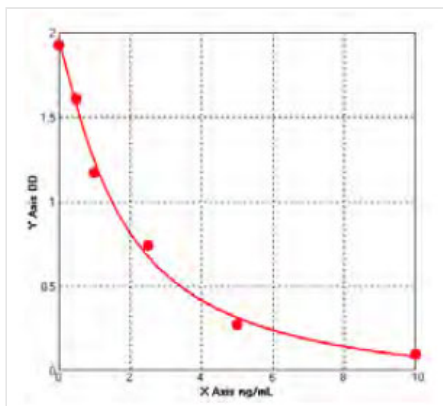

PRODUCT SYNONYMS

Omentin-1; Rat Omentin-1 ELISA Kit; OMT-1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of OMT1. No significant cross-reactivity or interference between OMT1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between OMT1 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for OMT-1 elisa kit	Intended Uses: This OMT1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of RatOMT1. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: OMT1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-OMT1 antibody and an OMT1-HRP conjugate. The assay sample and buffer are incubated together with OMT1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the OMT1 concentration since OMT1 from samples and OMT1-HRP conjugate compete for the anti-OMT1 antibody binding site. Since the number of sites is limited, as more sites are occupied by OMT1 from the sample, fewer sites are left to bind OMT1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The OMT1 concentration in each sample is interpolated from this standard curve.
