

IL4R / CD124 recombinant protein

Recombinant Human IL4R / CD124 Protein (His tag)

CATALOG #
AAA173567

HOST
Human Cells

PRODUCT SYNONYMS

IL4R / CD124; Recombinant Human IL4R / CD124 Protein (His tag); CD124; IL4RA; IL4R; IL4R / CD124 recombinant protein

PRODUCT SPECIFICATIONS

Host	Human Cells
Purity/Purification	> 98 % as determined by SDS-PAGE
Form/Format	Lyophilized from sterile PBS, pH 7.4
Sequence Length	825
Predicted N Terminal	Met 26
Endotoxin	< 1.0 EU per mug of the protein as determined by the LAL method
Preparation and Storage	Samples are stable for up to twelve months from date of receipt at -70 degree C

ADDITIONAL INFORMATION

Related Product Information for IL4R / CD124 recombinant protein	Background: The cluster of differentiation (CD) system is commonly used as cell markers in immunophenotyping. Different kinds of cells in the immune system can be identified through the surface CD molecules which associating with the immune function of the cell. There are more than 320 CD unique clusters and subclusters have been identified. Some of the CD molecules serve as receptors or ligands important to the cell through initiating a signal cascade which then alter the behavior of the cell. Some CD proteins do not take part in cell signal process but have other functions such as cell adhesion. CD124, also known as interleukin 4 receptor (IL4R), is a type I transmembrane protein that can regulate IgE antibody production in B cells through binding to interleukin 4 and interleukin 13 and promote differentiation of Th2 cells through binding to interleukin 4. The membrane-bound form of CD124 can be hydrolyzed to soluble form which can inhibit IL4-mediated cell proliferation and IL5 upregulation by T-cells. Description: A DNA sequence encoding the human IL4R (NP_000409.1) precursor (Met 1-His 232) was fused with a polyhistidine tag at the C-terminus.
