ADDITIONAL INFORMATION

Related Product Information for anti-Kv10.2 antibody	This gene encodes a member of voltage-gated potassium channels. Members of this family have diverse functions, including regulating neurotransmitter and hormone release, cardiac function, and cell volume. This protein is an outward-rectifying, noninactivating channel. Alternative splicing results in multiple transcript variants. KCNH5 (Potassium Voltage-Gated Channel Subfamily H Member 5) is a Protein Coding gene. Among its related pathways are Potassium Channels and Transmission across Chemical Synapses. GO annotations related to this gene include signal transducer activity and ion channel activity. An important paralog of this gene is KCNH1.
