ADDITIONAL INFORMATION

Related Product Information for anti-GSC antibody	GSC (Goosecoid Homeobox) is a Protein Coding gene. Diseases associated with GSC include Short Stature, Auditory Canal Atresia, Mandibular Hypoplasia, Skeletal Abnormalities and Auditory Neuropathy. Among its related pathways are Regulation of retinoblastoma protein and Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers. GO annotations related to this gene include sequence-specific DNA binding and RNA polymerase II repressing transcription factor binding. An important paralog of this gene is GSC2.This gene encodes a member of the bicoid subfamily of the paired (PRD) homeobox family of proteins. The encoded protein acts as a transcription factor and may be autoregulatory. A similar protein in mice plays a role in craniofacial and rib cage development during embryogenesis.
