### PRODUCT SYNONYMS

BCL6B; Polyclonal Antibody; BCL6B Polyclonal Antibody; B cell CLL/lymphoma 6; member B (zinc finger protein); B-cell CLL/lymphoma 6; BAZF; Bcl6 associated zinc finger protein; Bcl6-associated zinc finger protein; ZBTB28; Zinc finger protein 62; ZNF62; anti-BCL6B antibody

### PRODUCT SPECIFICATIONS

|                                                 |                                                                        |
|-------------------------------------------------|------------------------------------------------------------------------|
| Host                                            | Rabbit                                                                 |
| Reactivity                                      | Human, Mouse                                                           |
| Clonality                                       | Polyclonal                                                             |
| Isotype                                         | IgG                                                                    |
| Purity/Purification                             | Antigen Affinity Purification                                          |
| Form/Format                                     | PBS with 0.05% NaN <sub>3</sub> and 40% Glycerol, pH7.4                |
| Sequence Length                                 | 480                                                                    |
| Applicable Applications for anti-BCL6B antibody | ELISA, IHC (Immunohistochemistry)                                      |
| Immunogen                                       | Fusion protein of human BCL6B                                          |
| Note                                            | Centrifuge before opening to ensure complete recovery of vial contents |
| Preparation and Storage                         | Store at -20°C. Avoid freeze/thaw cycles.                              |

| Related Product Information for anti-BCL6B antibody | Bcl-6, a transcriptional repressor, binds Stat recognition-like DNA elements and influences germinal center development and cell differentiation. Additionally, Bcl-6 negatively regulates NF $\kappa$ B expression, thereby inhibiting NF $\kappa$ B-mediated cellular functions. Bcl-6b (B-cell CLL/lymphoma 6, member B), also known as ZNF62, BAZF or ZBTB28, is a 480 amino acid nuclear protein that contains one BTB (POZ) domain and five C2H2-type zinc fingers. Expressed ubiquitously with highest expression in placenta and heart, Bcl-6b associates with Bcl-6 and functions as a sequence-specific transcriptional repressor that is thought to be necessary for early B-cell development. The gene encoding Bcl-6b maps to human chromosome 17, which comprises over 2.5% of the human genome and encodes over 1,200 genes. |
| Product Categories/Family for anti-BCL6B antibody   | Epigenetics and Nuclear Signaling; Stem Cells                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
