Principle of the Assay: This kit uses Competitive-ELISA as the method. It can detect Sulfamerazine (SM1) in samples, such as honey, muscle, etc. This kit is composed of ELISA Microtiter plate, HRP conjugate, antibody working solution, standard and other supplementary reagents. The microtiter plate in this kit has been pre-coated with coupled antigen. During the reaction, SM1 in the samples or standard competes with coupled antigen on the solid phase supporter for sites of anti-SM1 antibody. Then Horseradish Peroxidase (HRP) conjugate is added to each microtiter plate well, and substrate reagent is added for color development. There is a negative correlation between the OD value of samples and the concentration of SM1. The concentration of SM1 in the samples can be calculated by comparing the OD of the samples to the standard curve.
