

Rabbit Nerve Growth Factor (NGF) ELISA Kit | NGF elisa kit

Rabbit Nerve Growth Factor (NGF) ELISA Kit

CATALOG #
AAA188088

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Nerve Growth Factor (NGF); Rabbit Nerve Growth Factor (NGF) ELISA Kit; NGFB; Beta-NGF; HSN5; NGF-B; Beta-Nerve Growth Factor; NGF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of Nerve Growth Factor (NGF). No significant cross-reactivity or interference between Nerve Growth Factor (NGF) and analogues was observed.
Sequence Length	231
Assay Type	Double-antibody Sandwich
Samples	Serum, Plasma, Tissue Homogenates, Cell Lysates, Cell Culture Supernates and Other Biological Fluids
Detection Range	31.2-2,000pg/mL
Sensitivity	The minimum detectable dose of this kit is typically less than 12.4pg/mL
Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level Nerve Growth Factor (NGF) were tested 20 times on one plate, respectively. Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level Nerve Growth Factor (NGF) were tested on 3 different plates, 8 replicates in each plate. $CV(\%) = SD/mean \times 100$ Intra-Assay: $CV < 10\%$ Inter-Assay: $CV < 12\%$
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for NGF elisa kit	The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Nerve Growth Factor (NGF). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Nerve Growth Factor (NGF). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Nerve Growth Factor (NGF), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Nerve Growth Factor (NGF) in the samples is then determined by comparing the O.D. of the samples to the standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	4033770
NCBI GeneID	108709389
UniProt Accession #	P21617
NCBI Official Full Name	Nerve growth factor
NCBI Official Synonym Full Names	nerve growth factor S homeolog
NCBI Official Symbol	ngf.S
NCBI Official Synonym Symbols	ngf; ngfb
NCBI Protein Information	nerve growth factor
UniProt Protein Name	Nerve growth factor
UniProt Gene Name	ngf
UniProt Synonym Gene Names	ngfb; NGF

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
