ADDITIONAL INFORMATION

Related Product Information for GSTs elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Fish GSTs antibody. GSTs present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Fish GSTs Antibody is added and binds to GSTs in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GSTs antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Fish GSTs. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Fish glutathione S-transferases (also known as GSTs) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
