ADDITIONAL INFORMATION

Related Product Information for COL2a1 elisa kit	Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to COL2a1. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to COL2a1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain COL2a1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of COL2a1 in the samples is then determined by comparing the O.D. of the samples to the standard curve. Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of COL2a1 in mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.
