

## Sheep Interferon Gamma (IFNg) ELISA Kit | IFNg elisa kit

Sheep Interferon Gamma (IFNg) ELISA Kit

CATALOG #  
**AAA190144**

REACTIVITY  
**Sheep**

### PRODUCT SYNONYMS

Interferon Gamma (IFNg); Sheep Interferon Gamma (IFNg) ELISA Kit; IFNg ELISA kit (Sheep); Interferon Gamma; IFN-G; IFG; IFI; INFr; IFN; Immune Interferon; IFNg elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Reactivity              | Sheep                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of Interferon Gamma (IFNg). No significant cross-reactivity or interference between Interferon Gamma (IFNg) and analogues was observed.<br>Reactive with Sheep IFNg/Interferon Gamma                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Assay Type              | Double-antibody Sandwich                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Function                | Detects protein (regular version)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Assay Procedure Summary | <ol style="list-style-type: none"> <li>1. Prepare all reagents, samples and standards</li> <li>2. Add 100ul standard or sample to each well. Incubate 2 hours at 37 degree C</li> <li>3. Aspirate and add 100ul prepared Detection Reagent A. Incubate 1 hour at 37 degree C</li> <li>4. Aspirate and wash 3 times</li> <li>5. Add 100ul prepared Detection Reagent B. Incubate 30 minutes at 37 degree C</li> <li>6. Aspirate and wash 5 times</li> <li>7. Add 90ul Substrate Solution. Incubate 10-20 minutes at 37 degree C</li> <li>8. Add 50ul Stop Solution. Read at 450nm immediately.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                   |
| Test Principle          | The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Interferon Gamma (IFNg). Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody specific to Interferon Gamma (IFNg). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Interferon Gamma (IFNg), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of Interferon Gamma (IFNg) in the samples is then determined by comparing the O.D. of the samples to the standard curve. |

| Research Area           | Cytokine, Infection immunity                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Preparation and Storage | Store at 4 degree C for 1 month/-20 degree C for long-term (One year within shelf life)<br>The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |
