

Duck Tumor necrosis factor alpha (TNF-alpha) ELISA Kit | TNF-alpha elisa kit

Duck Tumor necrosis factor alpha (TNF-alpha) ELISA Kit

CATALOG #
AAA190381

REACTIVITY
Duck

PRODUCT SYNONYMS

Tumor necrosis factor alpha (TNF-alpha); Duck Tumor necrosis factor alpha (TNF-alpha) ELISA Kit; TNF; DADB-70P7.1; DIF; TNF-alpha; TNFA; TNFSF2; APC1 protein|TNF superfamily; member 2|TNF; macrophage-derived|TNF; monocyte-derived|cachectin|tumor necrosis factor alpha; TNFSF7; TNF-alpha elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Duck
Specificity	This assay has high sensitivity and excellent specificity for detection of Duck TNF-alpha. No significant cross-reactivity or interference between Duck TNF-alpha and analogues was observed.
Assay Type	Quantitative Sandwich
Samples	Serum, plasma and other biological fluids
Detection Range	6.25 pg/mL - 400 pg/mL
Sensitivity	3.1 pg/mL (mean of 6 independent assays)
Intra-assay Precision	Intra-assay Precision (Precision within an assay) Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision. Intra-Assay: CV<8%
Inter-assay Precision	Inter-assay Precision (Precision between assays) Three samples of known concentration were tested in forty separate assays to assess inter-assay precision. CV (%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	Store at 2-8 degree C. Please refer to Instruction Manual.

ADDITIONAL INFORMATION

Related Product Information for TNF-alpha elisa kit

Principle of the Assay: This assay employs a two-site sandwich ELISA to quantitate TNF-alpha in Duck serum, plasma. An antibody specific for TNF-alpha has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any TNF-alpha present is bound by the immobilized antibody. After removing any unbound substances, a biotin- conjugated antibody specific for TNF-alpha is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TNF-alpha bound in the initial step. The color development is stopped and the intensity of the color is measured.

Intended Uses: For the quantitative detection of Duck Tumor necrosis factor alpha (TNF-alpha) concentration in serum, plasma and other biological fluids.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
