

Human Pro-collagen I alpha 1/COL1A1 ELISA Kit | COL1A1 elisa kit

Human Pro-collagen I alpha 1/COL1A1 PicoKine ELISA Kit

CATALOG # AAA19181	REACTIVITY Human
------------------------------	----------------------------

PRODUCT SYNONYMS

Pro-collagen I alpha 1/COL1A1; Human Pro-collagen I alpha 1/COL1A1 PicoKine ELISA Kit; Human COL1A1; COL1A1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	Natural and recombinant Human COL1A1
Samples	Cell culture supernatants, serum and plasma (heparin, EDTA, citrate)
Detection Range	31.2 pg/ml - 2,000 pg/ml
Sensitivity	<10 pg/ml
Intra-assay Precision	Intra-Assay Precision (Precision within an assay): Three samples of known concentration were tested on one plate to assess intra-assay precision.
Inter-assay Precision	Inter-Assay Precision (Precision across assays): Three samples of known concentration were tested in separate assays to assess inter-assay precision.

ADDITIONAL INFORMATION

Related Product Information for COL1A1 elisa kit	Background: Collagen, type I, alpha 1, also known as COL1A1, is a human gene that encodes the major component of type I collagen, the fibrillar collagen found in most connective tissues, including cartilage. This gene is mapped to 17q21.33. And this gene encodes the pro-alpha1 chains of type I collagen whose triple helix comprises two alpha1 chains and one alpha2 chain. Type I is a fibril-forming collagen found in most connective tissues and is abundant in bone, cornea, dermis and tendon. Mutations in this gene are associated with osteogenesis imperfecta types I-IV, Ehlers-Danlos syndrome type VIIA, Ehlers-Danlos syndrome Classical type, Caffey Disease and idiopathic osteoporosis. Principle of the Assay: The Picokine™ Human COL1A1 Pre-Coated ELISA (Enzyme-Linked Immunosorbent Assay) kit is a solid-phase immunoassay specially designed to measure Human COL1A1 with a 96-well strip plate that is pre-coated with antibody specific for COL1A1. The detection antibody is a biotinylated antibody specific for COL1A1. The capture antibody is a monoclonal antibody from mouse and the detection antibody is a biotinylated polyclonal antibody from goat. The kit contains recombinant Human COL1A1 with immunogen: Expression system for standard: CHO; Immunogen sequence: Q23-K277 + G1094-L1464. The kit is analytically validated with ready-to-use reagents. To measure Human COL1A1, add standards and samples to the wells, then add the biotinylated detection antibody. Wash the wells with PBS or TBS buffer, and add Avidin-Biotin-Peroxidase Complex (ABC-HRP). Wash away the unbounded ABC-HRP with PBS or TBS buffer and add TMB. TMB is an HRP substrate and will be catalyzed to produce a blue color product, which changes into yellow after adding the acidic stop solution. The absorbance of the yellow product at 450nm is linearly proportional to Human COL1A1 in the sample. Read the absorbance of the yellow product in each well using a plate reader, and benchmark the sample wells' readings against the standard curve to determine the concentration of Human COL1A1 in the sample.
