

Mouse Contactin-4 ELISA Kit | CNTN4 elisa kit

Mouse Contactin-4 PicoKine ELISA Kit

CATALOG #
AAA19188

REACTIVITY
Mouse

PRODUCT SYNONYMS

Contactin-4; Mouse Contactin-4 PicoKine ELISA Kit; Mouse Contactin-4; contactin 4; Brain-derived immunoglobulin superfamily protein 2; BIG-2; Cntn4; Kiaa3024; CNTN4 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	Natural and recombinant Mouse Cntn4
Sequence Length	1026
Samples	Cell culture supernates, serum and plasma (heparin, edta, citrate)
Detection Range	312pg/ml-20000pg/ml
Sensitivity	<50pg/ml
Intra-assay Precision	Intra-Assay Precision (Precision within an assay): Three samples of known concentration were tested on one plate to assess intra-assay precision.
Inter-assay Precision	Inter-Assay Precision (Precision across assays):Three samples of known concentration were tested in separate assays to assess interassay precision.
Preparation and Storage	Store at 4 degree C for 6 months. Store at -20 degree C for 12 months. Avoid multiple freeze-thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for CNTN4 elisa kit	Principle of the Assay: The Picokine™ Mouse Cntn4 Pre-Coated ELISA (Enzyme-Linked Immunosorbent Assay) kit is a solid phase immunoassay specially designed to measure Mouse Cntn4 with a 96-well strip plate that is pre-coated with antibody specific for Cntn4. The detection antibody is a biotinylated antibody specific for Cntn4. The capture antibody is a monoclonal antibody from rat, the detection antibody is a biotinylated polyclonal antibody from goat. The kit contains recombinant Mouse Cntn4 with immunogen: Expression system for standard: NSO, Immunogen sequence: D19-S1000. The kit is analytically validated with ready to use reagents. To measure Mouse Cntn4, add standards and samples to the wells, then add the biotinylated detection antibody. Wash the wells with PBS or TBS buffer, and add Avidin-Biotin-Peroxidase Complex (ABC-HRP). Wash away the unbounded ABC-HRP with PBS or TBS buffer and add TMB. TMB is substrate to HRP and will be catalyzed to produce a blue color product, which changes into yellow after adding acidic stop solution. The density of the yellow product is linearly proportional to Mouse Cntn4 in the sample. Read the density of the yellow product in each well using a plate reader, and benchmark the sample wells' readings against the standard curve to determine the concentration of Mouse Cntn4 in the sample. Background/Introduction: Contactin-4 is a protein that in humans is encoded by the CNTN4 gene. It is mapped to 6; 6 E1. The protein encoded by this gene is a member of the immunoglobulin superfamily. It is a glycosylphosphatidylinositol (GPI)-anchored neuronal membrane protein that functions as a cell adhesion molecule. It may play a role in the formation of axon connections in the developing nervous system. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of some of these variants has not been determined.
